

New STIR/SHAKEN Call Signing Solution for Voice Service Providers

Zero Network Maintenance Required

Now Available!

VI Communications Services, by Sangoma, is excited to announce that our STIR/SHAKEN service for Voice Service Providers is now available for purchase!

Since the FCC's most recent STIR/SHAKEN implementation deadline for non-facilities-based providers, TRACED Act compliance has been a huge disruptor for small voice service providers. Our goal is to offer a quick and easy solution for VSPs to become compliant with minimal investment or network resources required.

What does this service do?

VI's STIR/SHAKEN service allows voice service providers to provide an attestation for outbound calls using their unique certificate. This solution provides a quick and easy path to compliance with the TRACED Act while allowing them to keep their day-to-day businesses running efficiently.

How does it work?

- 1 VI provisions and hosts a dedicated signing server on our network.
- 2 VI configures the server with your unique certificate and desired attestation rules.
- 3 Once live, the server applies attestation to all outbound calls sent to the VI network using your unique certificate. **If all outbound calls are sent to VI, VSPs will be able to attest to complete STIR/SHAKEN implementation with the FCC.**

Primary Service Benefits

- ⦿ **Zero** configuration changes required to voice network and/or on-prem devices
- ⦿ No SBC or SIP proxy required
- ⦿ SIP Traffic flow remains the same as prior to installation
- ⦿ VI manages all necessary monitoring and maintenance for the dedicated server – In the event of an issue, VI will make routing changes to ensure that your traffic continues to be signed
